

As a shipper/forwarder, select the right service for the Secure Chain

Step 1

I want to be able to receive a container release and forward this again.

Step 2

In addition, I want 24/7 access to current data on:

- ETA, ATA
- My cargo
- The unloading time
- Gate in / Gate out

All I need is the ability to receive and forward the release. I do not require any additional information.

Step 3

I want to integrate the data and actions into my own system (API).

All I want is to manually use a Portbase website.

I want to integrate the data and actions into my own system (API).

All I want is to manually use a Portbase website.

Cargo Controller

Cargo Release Manager

Besides a forwarder, do you also operate as an inland operator (road, barge, rail)? Then you will also need the Portbase service Hinterland Container Notification to receive the container release and pre-notify at the deepsea terminal.

Read more about the differences between [Cargo Controller](#) and [Cargo Release Manager](#) here

Have you made your decision?
These are your next steps:

1. Create an account on the central login system of Portbase: **IAMconnected**.
2. Next, register for one of the two services: **Cargo Controller** or **Cargo Release Manager**.
3. If you are a customer of the shipping line, enter the customer code in the selected service.

Now, you are ready to receive and forward your container releases via Portbase!
